Ship repair is not only about keeping the vessel on the water but also improving quality of life for all members.

International Air Tool & Supply Company understands the special demands of shipyard applications, therefore can provide you with superior solutions to your everyday challenges.

PNEUMATIC HOISTS

Ingersoll Rand air hoist series are the ideal choice when high speed, high duty cycle, precision spotting, and the ability to operate in harsh environments are the determining factors.

ELECTRIC HOISTS

The Quantum series electric hoist has a range of 1/8 ton up to 5 metric ton capacity and boasts an impressive design with a focus on safety, performance and reliability.

MCH5 CLASSIC MANUAL CHAIN HOISTS

Ingersoll Rand MCH5 Classic Series Manual Chain Hoists are ideal for all industrial pulling, lifting, and positioning applications.

ANGLE GRINDERS

Abrasives for angle grinders are significantly less expensive than other grinding options. They are easy and quick to change when working on large items such as ship sections.

STRAIGHT GRINDERS

Straight grinders are durable, versatile, and cost-effective. Their compact design offers exceptional maneuverability and accessibility for difficult-to-reach spots.

VERTICAL GRINDERS

Ingersoll Rand Vertical Grinders are designed for heavy and rapid material removal. They can improve roundness and facilitate single-setup processing.
