Our commitment to Sustainability

“Countries, Citizens & Companies have a shared responsibility towards Sustainability. **As a responsible Industrial player, we take our Corporate Social Responsibility seriously, guided by the Sustainable Development Goals** from the United Nations.

We strive to conduct our business in an ethical, environmental, and humane manner. We are now setting even more ambitious targets and taking actions accordingly.

Sustainability is at the core of our approach and influences our decisions at every level.

To evaluate our activities and demonstrate our commitment to sustainability, we rely on external Environmental, Social and Governance (ESG) assessment platforms, such as **EcoVadis**. This enables us to challenge our targets and the way we do things.”

Sustainability 2024 Achievements & 2025 Targets

Since January 2021, the CO₂ impact of any new product is measured through a **Product Carbon Footprint (PCF)** based on ISO 14067:2018 standard. This measure enables us to improve tool efficiency along the product development process and to provide product recommendations to our customers.

Packaging

In 2024, we challenged CP Tools packaging. Most of our outer carton were made with the use of many colors and glossy finish.
We decided to use as of now a minimalist approach using only black ink on raw cardboard.

Find the Right Tool in Just a Few Clicks

Try out our selectors and configurators!

Whether you're looking for the perfect air motor, the ideal grinder, or the best air line setup, our smart selectors and configurators are here to help.

Designed for professionals, these tools guide you to the most suitable solution based on your specific needs and working conditions.

Assembly Tool selector

Choose the best assembly tool for your production needs with our Assembly Tool Selector. Define your torque, speed, and workflow requirements for consistent and reliable assembly operations. Begin by outlining your application needs:

- Screwdrivers
- Precision Fastening
- Loosening-Breaking
- Fastening & Torque Limited

Grinder selector

Discover the ideal industrial grinder for your needs with our Grinder Selector Tool! Whether you need an industrial, super industrial, or general maintenance model, our tool helps you identify the best fit. Simply follow these various application criteria to streamline your operations and enhance productivity:

- Disc type: depressed-center wheel, straight cut-off wheel, straight cup wheel, flaring cup wheel, flap disc
- Disc size: from 100 mm to 230 mm
- Tool shape: angle, straight, or vertical
- Spindle type: Hex or M14

Sander selector

Find the right sander for a flawless finish! Select your tool based on surface type, material, and application. Answer these questions to make your ideal selection. Our selector guides you to the ideal sander for precision, comfort, and efficiency:

- Which abrasives do you typically use?
- What size of abrasive do you need?
- What tool configuration do you prefer?
- What orbit size do you require?

Airline configurator

Optimize your air line setup with our Airline Configurator. It helps you select the right tool and ensures efficient air network management. Start by considering these key factors:

- What tool are you looking for?
- What is the region in location?
- What is the length of the hose?
- What is the coupling type?

Air Motor selector

Selecting an air motor is now easier than ever with our Air Motor Selector tool. It saves you time and minimizes the risk of errors. Here's how you can make a quick and easy selection:

- Select your unit system
- Identify the working point by entering your working parameters
- Specify your preferences for shaft type, raw material, and rotation direction
- Discover our pre-selection and check the curves and dimensional aspects

Learn how to differentiate soft and hard joint

Soft or hard joint designate the nature of the junction of the two surfaces that are assembled or disassembled.

SOFT JOINT

Low resistance to turning until the bolt (or nut) reaches its seating, after which resistance slowly increases.
A joint in which the plates and material between the nut and bolt bearing surfaces have a low stiffness when subjected to compression by the bolt load.
Often the placement of a gasket in a joint results in a soft joint.

VERY SOFT JOINT

Rubber

Wood

HARD JOINT

Low resistance to turning until the bolt (or nut) reaches its seating, after which resistance rapidly increases.
A joint in which the plates and material between the nut and bolt bearing surfaces have a high stiffness when subjected to compression by the bolt load.
Metal to metal results in a hard joint.

VERY HARD JOINT

TORQUE WRENCHES

Mechanical Torque Wrenches

CP89 SERIES

Complete range 1/4" - 3/8" - 1/2" - 3/4" - 1"

MADE FOR LONG-LASTING ACCURACY

Long-lasting accuracy torque wrench up to 25,000 cycles for vehicle services and MRO applications.

FEATURES AND BENEFITS

- Precision: 4% according to the 6789 ISO specifications
- Comfort: Black aluminum handle (1)
- Easy & precise adjustment : Scale in Nm - Torque adjustment with manual locking in front of the handle + fine scale graduation (1 Nm) (2)
- Robust : 54 teeth ratchet with quick socket release – pear head ratchet – 4/ 5 teeth in contact when tightening (3)
- Complete range : 1/4" – 3/8" – 1/2" – 3/4" – 1"
- Durable : Tolerance of durability -> up to 20000 cycles
- Touch & sound signals on release
- Provided with calibration certificate
- Provided in a protective Blow molded case

CP89 ETORQUE

Capacity 1/2"

QUALITY CONTROL ANYWHERE. PERFORMANCE ANYTIME.

CP89 eTorque Wrenches provide accuracy, durability, and connectivity features not available anywhere else. Connected "TC" models utilize CPLinQ to control process quality. Standalone models allow quick adjustments to torque and accuracy at the tool.

FEATURES AND BENEFITS

- CPLinQ compatibility (TC models) with high precision at +/- 3% Torque & +/- 2% Angle according to ISO 6789 – 1 2027
- Haptic: 12 LED progressive light display, very strong noise and vibration indicators as torque spec is approached, met, and exceeded
- Durability: Robust gear system accurate up to 25,000 cycles
- Ergonomic: 72 teeth (5°) gear head for small working space jobs
- Easy to set up: user-friendly interface
- Greater operator comfort: soft grip, non-slip handle
- TC models also feature Adjustable Accuracy, Sequencing, Re-hit Detection, and Torque Check capabilities to ensure optimal production efficiency and proper application of torque every time

CPCare: Enhancing your tool performance and productivity

Introducing CPCare: the comprehensive service package designed for the CP tools. With CPCare, we offer a range of specialized services aimed at maximizing the efficiency and lifespan of your tool, ensuring you can work safely and efficiently.

With our tool failure analysis, we can identify and rectify any issues promptly, minimizing downtime and maximizing productivity. Regular preventive maintenance checks are also included in the package, allowing us to catch potential problems before they escalate, keeping your tool in prime condition. Benefit from tool failure analysis, preventive maintenance, budget control, calibration, and tool loan services. Our expert technicians prioritize proper tool usage and regular inspections to ensure optimal results.

Time saving by a clearly defined service process.

Efficient tool failure analysis done by continuous trained technician.

Test certificate report and calibration following ISO5393 and certified supplier ISO17025

Maintenance budget control

TOOL CALIBRATION

- ✓ Machine Capability Test certificate (MCT)
- ✓ Standard certificate worldwide
- ✓ Calibration process traceable to national standards following ISO 17025

CPCare

- ✓ Fixed price per year
- ✓ Preventive Maintenance wear out spare parts¹ and labour²
- ✓ Once per year or after x thousand cycles depending on which occurs sooner
- ✓ TOOL CALIBRATION after preventive maintenance

Opt. Tool loan during maintenance

¹ Wear out spare parts are the gearbox components which the wear does not depend on the torque applied but on the time the tools is used.

² During the preventive maintenance, the tool is disassembled, wear out spare parts are replaced. All other parts are cleaned and evaluated.

Extra quotation is issued only in case other parts should be replaced before the next PM.

CPCare Extends the life of your tool by up to 20%!

Battery Torque Wrenches

Process & Tooling to optimize your tightening process

STEP 1

Clean bare hub pilots, inspect for wear, and lubricate pads

STEP 2

Clean the drum and studs.
Inspect for fatigue with thread gauge

STEP 3

Clean both sides of each wheel with the CP7202D

STEP 4

Install both wheels.

STEP 5

Oil all studs with the oil can before any parts are installed

STEP 6

Lubricate each nut with one drop of oil between the nut and washer, then turn the washer to work the oil through

STEP 7

Install the nuts by hand.

STEP 8

Use a torque control tool, like the CP8854, to pre-tighten nuts down snug on wheel surface, following the star pattern

STEP 9

Torque all nuts with the CP8609 following the star pattern. Use the sequencing feature (available on CQ and TC versions)

STEP 10

Torque check all nuts with the CP8609 (only available on TC version)

PROCESS & TOOLING TO OPTIMIZE YOUR TIGHTENING PROCESS

STEP 1

Clean bare hub pilots, inspect for wear, and lubricate pads.

STEP 2

Clean the drum and studs. Inspect for fatigue with thread gauge.

STEP 3

Thoroughly clean both sides of each wheel with the CP7202D sander and an appropriate abrasive. Inspect all surfaces for cracks and unusual wear.

STEP 4

Install both wheels.

STEP 5

Place two drops of oil near the end of the stud.

STEP 6

Lubricate each nut with one drop of oil between the nut and washer. Rotate the washer to distribute the oil evenly.

STEP 7

Install the nuts by hand.

STEP 8

Use a CP7748 impact wrench on the lowest torque setting to quickly snug all the nuts prior to final torquing.

STEP 9

Using the BlueTork, follow the star pattern above to tighten the nuts to the specified torque.

STEP 10

To ensure each nut has been torqued, a clockwise check may be performed. The BlueTork is pre-calibrated and is designed for precise torquing.

*Procedure illustrated is for reference only. Actual wheel preparation and assembly is dependant on wheel type and may vary. Please refer to the manufacturer's recommendations for proper wheel assembly procedures.

Cordless Impact Wrenches

CP8854 SERIES

Output drive 1/2"

A 2-IN 1 UNIQUE TECHNOLOGY FOR LIGHT VEHICLE TIRE CHANGING

2 in 1 unique technology designed to turn performance, lightweight and the compact features of an air impact wrench into a cordless tool. The CP8854 series is designed for light vehicle tire changing applications in workshops and roadside assistance.

CP8854-2

Same feature as CP8854 with -2" anvil length

FEATURES AND BENEFITS

- Similar in length and weight to high performance 1/2" air Impacts. It offers great maneuverability and helps prevent arm injuries
- Lowest vibration on the market (9.3 m/s²) and noise level rate (87 db(A))
- High performance 4500 RPM. Able to deliver 780 ft.lbs. – 1050 Nm maximum torque in reverse
- One Shut Off Position in Forward (at 80 ft.lbs. / ≈ 120 Nm) means no more overtightening*
- No more hand tightening for better productivity with the snugging feature (2 stage trigger in Forward)

* Final torque must be applied manually using a calibrated torque wrench (please refer to the operator's manual)

Die Grinders

CP74 SERIES

ø1/4 (6.4mm) - 28,000 RPM

CHANGING A CARBIDE BURR HAS NEVER BEEN EASIER!

CP74 series, a 1/4" & 6mm die grinders range with spindle lock system which allows a high application coverage in the body shop and MRO market.

LOCKING SPINDLE SYSTEM, see details p. 64

FEATURES AND BENEFITS

- Burrs easily changeable allowing the operator to use only one wrench thanks to the new spindle lock system.
- Good surface grip avoiding the tool to slip once in operator's hand thanks to the handle's material (TPR) and ergonomics.
- High application coverage thanks to the multitude of heads (short & long straight, 120°, 90°)
- Less heat transfer between the motor and the sleeve thanks to the composite housing

DRILLS

▶ PISTOL GRIP DRILLS

- Ideal for all maintenance drilling tasks
- Drilling hole capacity up to 1/2" (13 mm) dia. (in steel)
- Best ergonomic handle
- Extra-support side handle recommended for better handling of drills with larger drilling capacity and higher torque

Air drill designs for drilling holes in wood, metal, plastic... CP offers a wide range of drills, from 1/4" (6 mm) to 1/2" (13 mm) chucks, from 500 to 4,200 rpm. To achieve the best drilling quality, the following table will assist you in selecting the most suitable drill: size of holes, type of material, power needed...

▶ ANGLE DRILLS

- Ideal for restricted access application
- Drilling hole capacity to 3/8" (10 mm) dia. (in steel)

▶ STRAIGHT DRILLS

- Mainly smaller diameter drilling less than 3/8" (10 mm) dia. (in steel)
- Favored for vertical drilling

M3 to M12

PROFESSIONAL & COMFORTABLE OPERATION OF RIVETS!

If you are looking for high productive riveters including convenient features to get your job done fast and safe without any compromise, our CP988 series is designed to answer all your assembly needs.

FEATURES AND BENEFITS

- Powerful with high setting forces
- Comfortable and safe with low vibration and kickback
- Cold insulating composite handle higher comfort
- Flexible air connection with 360° rotation option
- Robust with an industrial-grade aluminum alloy cylinder material

Automatic function to thread and unthread rivet nuts for fast processing
Large reverse switch on the back (only necessary in case of correction)
Precise setting stroke adjustment from 1-7mm

Blind rivet nuts are applied to metal sheets when a thread is needed.
It is a **preparation for a non-permanent connection type (thread + screw)**

Step 2 and Step 4 are performed automatically by the CP9888

→ Very fast processing

Step 1

Put the rivet nut into the hole of the metal sheet

Step 2

Threading the blind nut riveter into the blind rivet nut

Step 3

Setting the rivet nut by axial force

Step 4

Unthreading the blind nut riveter from the blind rivet nut

Step 5

Add e.g. a second metal sheet and turn in the screw

Lift equipment

CP80 SERIES

DESIGNED FOR VERSATILITY AND STURDINESS

Rugged and low profile trolley
jacks to leverage all light
vehicles

FEATURES AND BENEFITS

- Super low pick-up height to go easily under low profile vehicles
- Equipped with a double pump design to increase lifting speed and ergonomic foot pedal for fast approach without load
- Heavy duty steel welded chassis with reinforcing rims to ensure high resistance and durability
- Lifting arm allows high lifting capacities - height to max. 550 mm / 21.65 in. for use in SUV or pickup trucks.
- Includes a safety valve to prevent overloading

Air Hydraulic Jacks

CP85 SERIES

THE AIR HYDRAULIC JACK RANGE FOR HEAVY VEHICLES

Durable air hydraulic jack range for tire changing and maintenance of heavy vehicles

See accessories page 131

FEATURES AND BENEFITS

- Air powered piston for fast, high lift capacity on high-axle vehicles
- Hard chromium plated piston guarantees durability and resistance to corrosion
- Low profile construction allows easy access to lift low chassis trucks and buses
- Long handlebar allows easy access and control when fully positioned under vehicle.
- Handlebar locks in 3 positions: 45°, 90°, and 180° for easy manoeuvring.

Crane

CP83100

FAST OPERATION & SAFE WORKSHOP CRANE FOR DAILY APPLICATIONS

For operators looking for a fast and safe workshop crane, CP83100 is the best in choice for general mechanic applications on Light vehicles & Medium Duty Trucks.

Not marketed in the USA & Canada

FEATURES AND BENEFITS

- Fast Operation: 2x quicker than competition because of double pump system
- Safety: Feet locking system for folded and working positions & Dead man release valve
- High Access UP to 53.1 in / 1350 mm @ 500 Kg / 1100 lbs.
- Access to Low Clearance Cars:
Low profile wheels and arms - high: 3.54 in - 90 mm
- Easy to Use by only one Operator
because of a swivel pump handle position and a release valve at the bottom of the cylinder

Jump starters

CP90 SERIES

FAST CHARGING AND EASE OF USE

The Chicago Air batteryless jump starters provide convenience and ease to use to professionals who are looking for solutions to jump start a flat battery from light to heavy vehicles.

Not marketed in the USA & Canada

FEATURES AND BENEFITS

- 30 seconds on running engine are needed to recharge the battery and restart vehicles
- Ultracapacitor technology: Batteryless jump starter lasts for at least 1 million cycles for a 5-year warranty
- Equipped with a buzzer to prevent polarity inversion and a fuse to protect the vehicle and booster in case of improper use
- Lighter than standard jump starters and comes with a large, telescopic handle and 2 large wheels for easy transportation
- Jump starts are equipped with full electrical insulation for full protection from electric arcs during set-up

CP

Offers a wider range of couplings to create the best possible solution together with Power Tools.

Air Line Network

CP Air Preparation Units are designed to help you get maximum performance from your tools. They ensure minimal pressure drop and thus minimum energy losses in the air distribution system, benefiting the environment and cutting your operating costs.

The lifetime of your tools will be extended by using air preparation units and with that comes lower repair costs and less downtime. A correct air installation guarantees productivity and good total economy.

Air dryers and filters can cause a 0.2 - 0.3 bar (3-4 psi) pressure drop. However, for many applications these may be essential.

A carefully designed network virtually eliminates pressure drop. We recommend a Ring Main layout which has a slope away from the input of 1%.

To receive 6.3 bar (91psi) at the tool, the acceptable maximum pressure drop from airline accessories is 0.6 bar (9 psi). A combination of high performance components and careful engineering will achieve this.

A normal compressor can deliver up to 7.5 bar (109 psi) air line pressure, depending on start and stop settings.

FILTERS, REGULATORS, LUBRICATORS

Why should you use a filter, regulator and lubricator ?

The use of a filter, regulator and lubricator (in that order) for pretool air preparation is strongly recommended by CP. Proper air preparation will result in improved tool performance and increased tool life. The units should be mounted as close to the tool as possible, preferably right where the tool hose is connected to the system. To realize their full value, these units should be checked on a regular assigned basis by maintenance workers or the operators themselves.

AIR FILTER

Filter separates impurities such as water and solid particles.

Not using filters in combination with air tools leads to shorter service life, higher maintenance costs and lower efficiency. Old air systems with cool dryers, for instance, generate a lot of rust and running tools without installing a filter could damage the tool in less than a week.

CP filters separate up to 98% of the water when operating within their working range.

REGULATOR

The regulator ensures that the pre-set working pressure remains constant - regardless of pressure variations in the intake air and minor variations in the airflow rate. For example, a pressure of 1 bar higher than necessary results in a 16% increase in air consumption.

TOOL PRESSURE	AIR CONSUMPTION
91 psi (6 bar)	100 %
101 psi (7 bar)	110 %
116 psi (8 bar)	125 %

Spring controlled regulators are quick acting and therefore should be used for all types of air tools.

LUBRICATORS

If lubricators are not used, tool motor vanes will need to be changed more often. The life of the vanes may decrease to as little as 1/10th of the normal working time. The oil fog lubricator is the most common type of lubricator. It supplies a mist of oil to the air hose.

Air Line Network

- CP FRL – Filters, Regulators and Lubricators - units enable your tools to run at optimal performance, hence reducing downtime and increasing productivity.
- Simple to install on the air line with connection thread from 1/2" to 1", the solution can be adapted to customer's needs by choosing the proper modules, Regulator, lubricator, filter or filter-regulator. The automatic oil refilling system help to simplify the maintenance of the installation.
- Using CP FRL is a first step in the reduction of CO2 emission. The diaphragm type pressure valve limit pressure drop even with a high air flow.

THE FLEXIBILITY OF AIR FLEX

THE NEW CP AIR FLEX MAKES ALL RIGID HOSES FLEXIBLE AND MULTI-DIRECTIONAL.

Easy: less effort due to hose rigidity, makes work easier in hard to reach areas.

Less wear: no more premature hose wear.

Ergonomic and safety: no twisting, the hose remains in the ideal working position and lower the risk of tendinitis.

Air Flex used at 90 degrees 1/4"

ERGONOMIC FEATURES FOR AN OPTIMAL COMFORT

FOR OPEN HOSE REEL
TYPES SEE BELOW CHART

RATCHET SPRING

Provides easy locking
and retracting of hose

SWIVEL-PLATE BRACKET

Allows 180° movement
for easier hose handling

MULTI DIRECTIONAL SWIVEL-INLET

Easy connection
fixed pipes

MOVABLE RETAINING BALL

Allows easy adjustment
of leader hose to
desired length

APPLICATIONS

**INDUSTRIAL MAINTENANCE
AND PRODUCTION**

**OFF-ROAD MAINTENANCE
APPLICATIONS**

CP HOSE REEL SELECTION CRITERIA

- ✓ **First Consider the application and pressure requirements.**
NOTE: All our hose reel work at max working pressure 217psi (15bar)
- ✓ **Next determine the ID (Inside diameter) requirement for the hose (TIP: Always check the hose ID recommended for each tool in the catalogue/online catalogue)**
- ✓ **Then select length of the hose reel and material of hose depending on the work environment.**

IMPROVED DURABILITY

EFFIMAXHOSES

CP offers the highest quality Effi Max Series hoses with special features as low weight and flexibility to meet ergonomic demands.

Aimed to generic grinding applications

- Extreme low weight
- Antistatic
- Rubber hose
- Soft and flexible
- Welding spatter resistant

Standard quality hose in PUR and Rubber will provide the best quality product for the price for optimized work with pneumatic tools.

EFFI MAX WHIPS

Always use a hose whip between the tool and the air supply hose. It provides safety and longer tool air inlet life.

POLYURETHANE SPIRAL HOSE

Spiral hose are especially adapted for tools used at varying distances. Vertically or horizontally, together with a balancer spiral hose, it is a step forward in ergonomics. Equipped with ball bearing at one end (except the 11x16), they can be directly connected at the tool outlet, avoiding the hose to twist.

- Self retractable
- Light and flexible
- Strong and durable

CP's Easy Flow coupling is designed to eliminate air restriction which minimize the pressure drop. Thanks to its innovative design, EF is suited for rough environment and is easy and secure to connect and disconnect with a push and bend principle. The safety feature in EF couplings are vented version to minimize the risk of sudden separation of coupling and nipple.

CP offers a wider range of couplings to create the best possible solution together with Power Tools. The range consists of four types of couplings with different characteristic, all with the focus on quality, ergonomics and performance. To cover most of the global needs CP offers three types of nipple profiles, Euro-, ISO 6150B- and the Asian profile. With the Easy Flow coupling CP can present a unique coupling with no air restriction, minimizing the pressure drop.

Thanks to its innovative design EF is suited for rough environment and it is easy and secure to connect and disconnect with the push and bend principle. The safety feature in EF and Safety Couplings are vented versions to minimize the risk of sudden separation of coupling and nipple.

AIRFUSES

When a fitting comes loose or detached from a pressurized hose or the hose is damaged, the line pressure may cause hose whip. This dangerous situation can easily cause injury and damage. Fuses are used to reduce the likelihood of potentially dangerous hose whip. Air Fuses are designed to quickly shut off the supply air and reset automatically when the back pressure in the line downstream is restored.

Air Fuses help to meet OSHA requirement 1926.302 (USA) and may eliminate the need for restraining or shielding hose, as required by European Standard EN983.

MATERIALS

Body	Anodised aluminium
Internal parts	Brass
Spring	Stainless steel

- Reduces risk of hose whip, helping to protect personnel
- Simple and reliable design
- High life expectancy
- Aluminum anodised body for high corrosion resistance
- Auto-Reset to restart downstream activity with the minimum downtime.

BALANCERS - CP9911 TO CP9950

The CP balancers are premium quality products developed to take the weight of the tool away from the operator's arm. They eliminate stress and fatigue and help improve productivity. Ideally suited for heavy tools and/or repetitive tasks.

Spring retractor:

- Cylindrical shape
- Automatic load retraction
- Working area remains free
- Cable made of stainless steel
- Aluminium housing
- 5.2 to 8.2 ft (1,600 to 2,500 mm) cable stroke

Notes

GENERAL SAFETY INSTRUCTIONS FOR THE OPERATION OF POWER TOOLS

The goal of CP is to produce tools that help the operator work safely and efficiently. The most important safety device for this or any tool is the operator. Care and good judgement are the best protection against injury. All possible hazards cannot be covered here, but we have tried to highlight some of the important ones. Individuals should look for and obey Caution, Warning and Danger Signs placed on tools, and displayed in the workplace. Operators should read and follow safety instructions packed with each tool. For a copy of these instructions, contact your nearest CP representative via www.cp.com.

Learn how each tool works. Even if you have previously used similar tools, carefully check out each tool before you use it. Get the "feel" of it and know capabilities, limitations, potential hazards, how it operates and how it stops.

WARNING

Multiple Hazards. Read and understand safety instructions supplied with tool before operating or servicing. Failure to do so can result in serious bodily injury.

All tools are designed to operate on a air line pressure of 90 PSI (6.3 bar +/-0.15) bar in accordance with ISO2787, 8NTC1.2. Sound levels +/- 3dB(A)* are measured in accordance with EN ISO15744. Vibration values* are measured in accordance with ISO8662 & ISO28927

A higher pressure could affect the tools lifespan, and operator safety (excessive vibration, or abrasive over-speed and burst risk). We recommend the use of a gauge equipped FRL for every tool to operate this adjustment.

**These declared values were obtained by laboratory type testing in accordance with the stated standards and are suitable for comparison with the declared values of other tools tested in accordance with the same standards. These declared values are not adequate for use in risk assessments and values measured in individual work places may be higher. The actual exposure values and risk of harm experienced by an individual user are unique and depend upon the way the user works, the workpiece and the workstation design, as well upon the exposure time and the physical condition of the user.*

We, CP, cannot be held liable for the consequences of using the declared values, instead of values reflecting the actual exposure, in an individual risk assessment in a work place situation over which we have no control.

Compressed Air Hazards

- Air under pressure can cause injury. Never point an air hose at yourself or anyone else. Never blow your clothes free of dust with compressed air. Always direct exhaust air away from yourself and others in the work area.
- Always check for damaged or loose hoses and fittings before using an air tool, and replace if necessary. Whipping hoses can cause serious injury.
- Disconnect the tool from the air supply when not in use, before changing accessories, setting the torque, or when making repairs.
- Do not exceed rated air pressure to increase the output of the tool. This could cause injury and shorten tool life.
- Do not assemble quick coupler on the tool. Vibration can cause breakage resulting in a whipping air hose. Instead, use quick couplers on the end of a short leader hose.
- When universal twist couplings are used, lock pins must be installed to prevent accidental hose disconnection.
- Air tools are not intended for use in explosive atmospheres and are not insulated for contact with electric power sources.

Projectile Hazards for all air tools

- Always wear impact resistant eye and face protection when involved with or near the operation or the repair of air tools.

Noise Hazards

- Hearing loss can result from prolonged exposure to excessive sound levels.
- Use hearing protection as recommended by your employer or OSHA regulation (see 29 CFR part 1910).

Entanglement Hazards

- To reduce the risk of injury from entanglement, do not wear loose clothing when using rotating accessories.

Additional Hazards

- Slip/Trip/Fall is a major cause of serious injury or death. Beware of excess hose/cord left on the walking or work surface.
- Operators and maintenance personnel must be physically fit to perform job tasks, and handle the bulk, weight and power of the tool.
- Deburring tools should be used to reduce risk of cuts and abrasions due to burrs.
- Wear gloves to protect hands from sharp edges.

Breathing Hazards

- Proper breathing protection must be worn when working with materials which produce airborne particles.

Vibration Hazards

- Repetitive work motions, awkward positions and exposure to vibration may be harmful to your hands and arms.
- If numbness, tingling, pain or whitening of the skin occurs, stop using tool and consult a physician.

SPECIFIC SAFETY INSTRUCTIONS FOR POWER TOOL GROUPS

In addition to the General Safety Instructions, the following are safety instructions and warnings that apply to the safe operation of specific power tool groups. Consult ANSI B186.1 Safety Code for Portable Air Tools. Available from: America National Standards Institute (ANSI), 11 W. 42nd St., 13th floor, New York, New York 10036, (212) 642-4900; or the European Committee for Standardization, Rue de Stassart 36, 1050 Brussels, Belgium.

Impact Wrenches

- Never use hand sockets. Use only impact sockets in good condition. Sockets in poor condition reduce impact power and could also shatter, resulting in personal injury.
- When using a universal joint, never free run the tool, it may run too fast and cause the joint to be thrown from the tool.
- Always use the simplest hook-up possible. Long springy extension bars and adapters absorb impact power and could break loose resulting in personal injury. Instead, use deep sockets whenever possible.
- For tools using the pin and o-ring socket retainer, use the o-ring to securely retain the socket pin.

Abrasive Tools

- Never mount a grinding wheel on a sander.
- Never use a grinding wheel marked with a speed lower than the rated air grinder speed.
- All grinding wheels and polishing/sanding accessories should be checked for cracks or other damage before mounting and use.
- Always use the recommended wheel guard to prevent injury when performing grinding operations. If a guard has withstood wheel or disc breakage, it must be replaced.
- Position a guard between the grinding wheel or disc and the operator. Use barriers to protect others from fragments and grinding sparks.
- Make sure grinding wheels are mounted according to manufacturer's specifications; always use correct mounting flanges.
- Before grinding, test grinding wheel or disc by briefly running tool at full throttle. Be sure to use a barrier (such as under a heavy work table) to protect yourself from possible broken wheel parts.
- Never tamper with or remove a speed governor from a tool to make it run faster. Periodically check tool speed with a tachometer.

Assembly Tools

- Serious injury can result from over-torqued or under-torqued fasteners, which can break, or loosen and separate.
- Released assemblies can become projectiles. Assemblies requiring a specific torque must be checked using a torque meter.

Hammers

- All chisels, rivet sets and other accessories should be checked for cracks, excessive wear, or other physical damage before each use. Accessories that show signs of damage should be replaced immediately.
- Never use a tool without the proper accessory retainer.

Ratchets

- Never use hand sockets. Use only power drive sockets per ANSI B107.2.
- To reduce the risk of injury, always support the handle securely in the direction opposite of the spindle rotation to minimize torque reaction.

Specialty Tools

- Specific instructions/warnings affecting this group of tools are contained in product-specific documents accompanying each product.

Drills

- Keep away from rotating bit and chuck. You can become cut or burned if you come in contact with the drill bit, chips or work surface.
- Use intermittent drill pressure to avoid long shaved chips.
- The drill bit can suddenly bind and cause the work piece or tool to rotate causing arm and shoulder injuries.
- ANSI recommends use of a support handle on drills with a chuck larger than 3/8" (10 mm).

Accessories

- Always use accessories of correct size and design for the tool. Tool and accessories must not be modified in any way.
- Never use a tool without the proper accessory retainer.

See Safety Requirements for Abrading Materials with Coated Abrasives (B7.7) from ANSI.
